

# MacPhersons Glyphosate Bi Dri 700 Herbicide

## Introduction

As the name suggests MacPhersons Glyphosate Bi Dri 700 is an extruded granule formulation of Glyphosate in a dry form packed in a convenient 5kg (10 x 500g Sachets) box or 10kg Bag. The formulation is virtually odorless and is readily soluble in water. Bi Dri 700 is not classified a Dangerous Good according to the Australian Dangerous Good (ADG) Code. The label classification is S5 and it is a Group M Herbicide.

Bi Dri 700 is a fully registered Glyphosate for use in all situations where the common used liquid formulations are registered, including Aquatic uses. Bi Dri contains its own "Frog Friendly" surfactant and is ready to use from the carton. The surfactant loading is sufficient for high volume hand gun application without the addition of additional wetter's, except where indicated on the label

## Benefits of using Bi Dri 700

- Bi Dri 700 is a 700g/kg formulation (half the weight of 360g/L liquids for the same punch).
- Nationally registered for a range of aquatic weeds.
- Made in Australia and tested in Australian conditions.
- Dissolves easily in water and has been tested in all Australian water conditions (with agitation).
- Low Rates – A typical handgun rate for Bi Dri is 500gm/100 Litre. As a comparison a typical handgun rate for Glyphosate 360g/L formulations is 1 Litre / 100 Litres.
- Anecdotal evidence suggests a faster knockdown or "Brownout" on annual weeds with good efficacy on woody weeds.
- Easier handling – No measuring with our 500gm "Rip and Pour" packs or if you still prefer to measure we have 10kg bulk packs as well.
- Improved OH & S – No more lifting 20L drums. 10kg of Bi Dri 700 is equivalent to 19.4 Litres of 360g/L Glyphosate.
- No more empty drums to triple rinse and dispose. No more levies to pay. Bi Dri comes in a cardboard carton.
- Registered for Aerial Application.
